Editor: Juliana Swanson, Hawaii

*S*ri G. H. Visweswara (born in 1950) has a B.E in Electronics from Bangalore and a PG Diploma in Computer Science from IIT, Bombay, with honors. He has worked in very senior positions up to that of CEO and MD in the Information Technology industry, particularly in R&D for the past 37 years. He has learnt astrology by himself by studying many of the best books and authors, including the classics.

**Alzheimer's Disease:** Introduction

**Medical:**

- Medline Plus describes this disease briefly as follows: Alzheimer's Disease (AD) is the most common form of dementia among older people. Dementia is a brain disorder that seriously affects a person's ability to carry out daily activities.
- AD begins slowly. It first involves the parts of the brain that control thought, memory and language. People with AD may have trouble remembering things that happened recently or names of people they know. A related problem, mild cognitive impairment (MCI), causes more memory problems than normal for people of the same age. Many but not all of those with MCI will develop AD.
- In AD, over time, symptoms get worse. Those afflicted by AD may not recognize family members and may have trouble speaking, reading or writing. They may forget how to perform ordinary activities of daily living such as proper

grooming. Later on, they may become anxious or aggressive, or wander away from home. Eventually, they will need total care. This can cause great stress for family members who must care for them.

- AD usually begins after age 60. The risk goes up with advancing age. Risk is also higher if a family member has had the disease. No treatment can stop the disease. However, some drugs may help keep symptoms from getting worse for a limited time.
- According to latest figures of the World Health Organization, nearly 3.7 million people in India suffer from the disease—a number that is set to double over the next 20 years. Globally a whopping 35.6 million are afflicted by this debilitating condition.
- Recent developments in medicine claim that a vaccine for AD may become available in the next five to ten years.

### **Astrological:**

- Mr. Vaughn Paul Manley, M.A. in an article on March 8, 2007 has noted the following: *‘Recently I spoke with an ayurvedic physician who told me that Alzheimer’s Disease is the result of the constriction of blood flow to the brain, causing memory loss, and disorientation. He also said that the constriction of blood is due to an inflammation of the arteries leading to the brain. In ayurvedic terminology, inflammations are a pitta disorder or an excess of the fire element. In Vedic astrology, inflammations are associated with Mars.’*
- Mercury’s well-known significations include diseases of brain, disorders of nervous system, nervous breakdown, imperfections of tongue, speech disorders and defects of memory and intelligence.
- Saturn signifies old age and chronic, slowly deteriorating health problems.
- Gulika (Gk) and Maandi (Md) are considered to be generally harmful. Lords of Md rasi or grahas associated with Md are considered to be malefic. Mercury under the influence of Gk is said to cause diseases of the nervous system (including the brain), and is said to result in *Mathi Bhramana Yoga*, a combination that can signify mental confusion.
- Fifth house significations include good or bad memory, analytical skills and discrimination.
- The Mahadasha in effect would normally be around or after the age of sixty. The relevant Mahadasha lord and Antardasha lord will ‘trigger’ Mercury in some way.

Finding the parameters that may indicate AD has been done with this background in this article with 14 cases for which reasonable data was available.

Abbreviations: MD is Mahadasha and AD is Antar dasha.

## Common Pattern:

**P1:** Mercury is afflicted by Mars and in most cases additionally by Saturn. Affliction to the sign of Gemini can be considered a secondary condition. In some cases there may be affliction by the 6th and/or 8th lord (6/8L). Generally, there is no influence of an unblemished/unafflicted benefic on Mercury or Mars.

**P2:** Gk and/or Md influence Mercury in 'some way'.

**P3:** Fifth house (5H) and/or Fifth lord (5L) have some form of affliction.

**P4:** The Lagna or Lagna Lord (LL) are influenced by Mercury and/or Mars in 'some way'.

**P5:** Dasha lords around the relevant time of beginning of symptoms 'trigger' Mercury.

**P1:** Mercury is in close conjunction with Mars; Mercury dispoits Rahu; and Rahu aspects Mercury. Saturn is in a nakshatra of Mars. There is no influence of unblemished/unafflicted benefic on Mercury or Mars. In the D-9, Mercury conjoins Mars and dispoits Saturn.

**P2:** There is no direct influence of Gk or Md; Md is in the nakshatra of Mercury and Gk in that of Saturn. The Moon who dispoits these two is in the nakshatra of Saturn.

**P3:** The 5H is aspected by Saturn.

**P4:** LL is Mercury itself, which conjoins Mars.

**P5:** For the last eight years of his life, he suffered the mental deterioration that is symptomatic of AD. Dali died on January 23, 1989. That would imply around 1981 that the disease began. The dasha would be of Rahu-Rahu which commenced in Dec 1980. Rahu is placed alone in the sign of Mercury and aspects it. Before that it would have been the Mahadasha of Mars who is conjunct Mercury.
