Sri G. H. Visweswara (born in 1950) has a B.E in Electronics from Bangalore and a PG Diploma in Computer Science from IIT, Bombay, with honors. He has worked in very senior positions up to that of CEO and MD in the Information Technology industry, particularly in R&D for the past 37 years. He has learnt astrology by himself by studying many of the best books and authors, including the classics.

B reast Cancer, an Introduction (relevant to astrology)

Breast Cancer is cancer originating from breast tissue, most commonly from the inner lining of milk ducts that supply the ducts with milk. Breast cancer is a disease of humans and other mammals; while the overwhelming majority of cases in humans are women, men can also develop breast cancer. The size, stage, rate of growth, and other characteristics of the tumour determine the kinds of treatment. Occasionally, breast cancer presents as 'metastatic disease', that is, cancer that has spread beyond the original organ, typically to bone, liver, lung and brain.

Surgical removal of the tumour provides the single largest benefit, with surgery alone being capable of producing a cure in many cases. To somewhat increase the likelihood of long-term disease-free survival, several chemotherapy regimens are commonly given in addition to surgery.

It is said that over the course of a lifetime, 1 in 8 women will be diagnosed with breast cancer. Breast cancer is the most prevalent cancer among women and affects

approximately one million women worldwide.

How can astrology help?

Doctors categorize breast cancer patients from stage 0 to stage IV, with stage 0 being the very earliest cancer and stage IV indicating that the cancer has spread, or metastasized to other parts of the body. Stage refers to the extent or spread of the breast cancer.

According to one survey, for women diagnosed in the early 1990s in the West Midlands, '5-year relative survival rates' were 92% for stage I tumours, 73% for stage II tumours, 50% for stage III tumours and 13% for stage IV tumours. At ten years, the survival rates were around 5% lower for stage I and IV tumours, and around 10% lower for stage II and III tumours.

In other words, early detection & treatment increases the relative survival rates for the patients. Thus, if astrology can point out the propensity & possible time of occurrence, then coupled with advances in medical sciences, the relative survival rates can be increased significantly.

Medical facts/factors that astrologers should be aware of & can use to advantage

- ❖ **Symptom:** The first noticeable symptom of breast cancer is typically a **lump** that feels different from the rest of the breast tissue. More than 80% of breast cancer cases are discovered when the woman feels a lump. However, most symptoms of breast disorders, including lumps, do not turn out to represent underlying breast cancer. Benign breast diseases are more common causes of breast disorder symptoms. Nevertheless, the appearance of a new symptom should be taken seriously by both patients and their doctors, because of the possibility of an underlying breast cancer at almost any age.
- ❖ **Age factor:** The age of occurrence can be anywhere from 15 years to 95 years. Risk of developing breast cancer increases as one gets older. The majority of advanced breast cancer cases are found in women over age 50. The incidence of breast cancer increases with age and doubles every 10 years until the **menopause** when the rate of increase slows. Approximately a quarter of breast cancers affect women under the age of 50, a half occur between the ages of 50 and 69 and the remaining quarter develop in women who are 70 years or older.
- ❖ **Family history:** There is a higher risk for breast cancer if the person has a close relative who has had breast, uterine, ovarian, or colon cancer. About 20 - 30% of women with breast cancer have a family history of the disease.

- ❖ **Menstrual cycle:** Women who get their periods early (before age 12) or went through menopause late (after age 55) have an increased risk for breast cancer.
- ❖ **Alcohol Use:** Drinking more than 1 - 2 glasses of alcohol a day may increase risk for breast cancer.
- ❖ **Childbirth:** Women who have never had children or who had them only after age 30 have an increased risk for breast cancer. The risk of breast cancer in women who have their first child after the age of 30 is about twice that of women having their first child before the age of 20. The highest risk group are those who have their first child after the age of 35 and these women have an even higher risk than women who have no children. Being pregnant more than once or becoming pregnant at an early age reduces your risk of breast cancer.
- ❖ **Survival rates:** According to the American Cancer Society, the overall five-year survival rate for localized breast cancer is 98%. The survival rate for breast cancer that has spread to the chest wall or lymph nodes is in the 80% range, and at least a quarter of breast cancer patients with metastatic disease survive five years or more. For women diagnosed with breast cancer in 2001-2006, five-year relative survival rates have reached 82% (England only) compared with only 52% thirty years earlier in 1971-75. Ten-year survival rates have increased from 41% for women diagnosed in 1971-1975 to 73% for 1996-2000. Breast cancer mortality has dropped regularly since 1990, and rates continue to drop as doctors investigate novel ways of treating the number one cancer affecting women. *Hence dire predictions about the consequences should not be made unnecessarily.*

Astrological Indicators Of Breast Cancer

Some of the key parameters are discussed here. All medical factors given above have not been considered, but can be used as supportive factors by astrologers.

Parameter 1 (P1): Serious affliction to fourth House and /or its Lord.

Parameter 2 (P2): Serious affliction to Moon. (Additionally examination of sign Cancer is recommended).

Fourth house & Moon signify breasts. It is also useful to note that 2nd drekkana in 6th house represents right breast & 2nd drekkana in 8th house represents left breast.

Typically the afflictions will be due to planets Mars, Sat, Rahu/Ketu, afflicted Jup influencing the above entities, particularly the 4H. Double malefic affliction is an indication of more serious condition. The affliction should be examined in D-1, D-9 & preferably in D-3 also. Influence of Mars (& Ketu) and 8H/L indicates surgery. Influence of 8H/L is also an important factor indicating serious/continuing problem. Their association additionally with Lag/LL as well as afflictions to Lag/LL strengthens the case. Examining from Moon as Lagna is also recommended.

It may be useful to note that the nakshatras Vishakha (ruled by Jup) & Anuradha (ruled by Sat) represent breasts and Swati (ruled by Rahu) represents chest. Hence affliction by afflicted Sat, Jup or Rahu to 4H is an important factor to consider. Such affliction of these planets Jup & Sat could be by usual PAC with malefics as also by being associated with 8H/8L or being placed in the nakshatra of Rahu/Ketu.

Point to study: Whether influence of 12L on the above entities results in losing of breasts in surgery.

Parameter 3 (P₃): The dasha Lords should be related to and afflicting the entities mentioned in P₁ & P₂ and the age of the native should be above 15 years. The dasha of 6L/8L (or Rahu/Ketu in these houses) influencing Lag/LL can also be relevant. The transit, if supporting, gives further strength to the possibility.

Parameter 4 (P₄):

(A) There is an 'association' among Lagna/Lagna Lord, 6L & 8L. The simplest form being 6L & 8L being in mutual kendras.

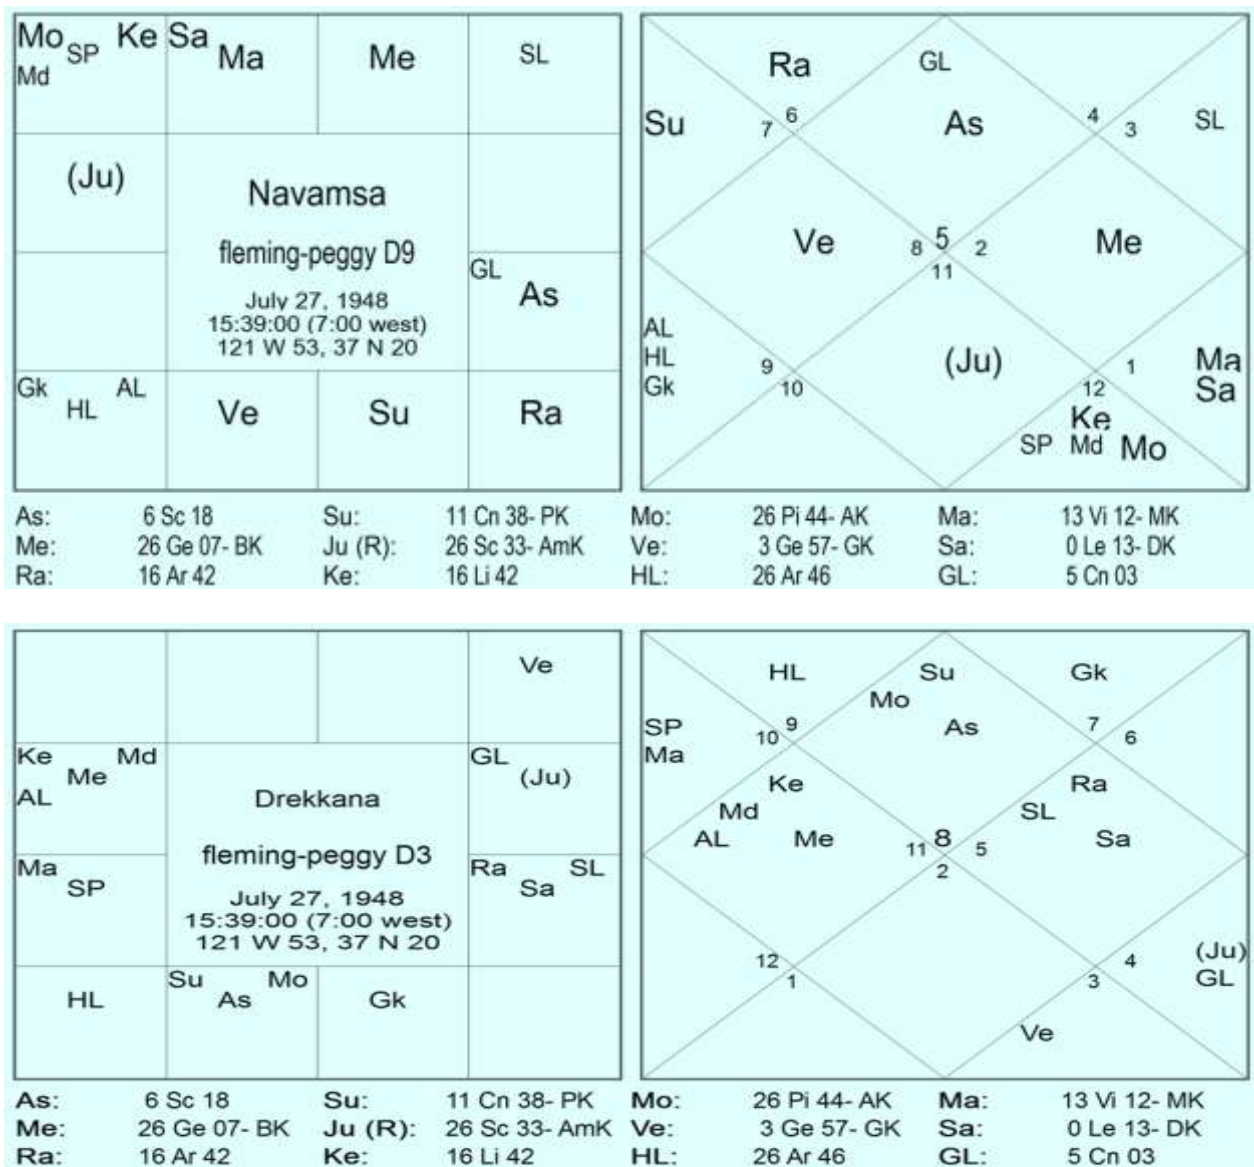

(B) One or more of the following conditions may also be present in the natal horoscope. These Conditions (other than 6 & 7) have been mentioned in literature as being indicative of cancer. *(In case studies below some conditions close to these are also listed to enable more case studies)*

1. A natural malefic as 6L posited in Lag, 8H or 10H.
2. 6L in 2H associated with Rahu/Sat.
3. Mars in 8H with Ketu or in 12H with Sat.
4. Rahu in 8H with Sat.
5. 7L in 6H associated with Rahu/Ket/Sat.

6. Jup in nakshatra of Mer can cause tumour.
7. Sat in nakshatra of Mar can cause tumour.
8. Lords of the Ascendant and the 6th in the 10th aspected by Saturn or Mars predispose one to cancer of the breast. If Aquarius is the Ascendant the chances are more.

Some Case Studies

Case 1:

Case history: On 30th Jan 1998, she was diagnosed with breast cancer. She had been shown cancer-free with a mammogram five months earlier so was not too concerned when she first noticed a lump in her breast. However, she underwent surgery on 10th Feb 1998. On 12th Feb 1998, she was told that the operation had been a success.

Astrological analysis:

Pr:

- 4H is aspected by Sat in paap-kartari and placed in the nakshatra of Ketu. In D-9, Mars afflicted with Sat (deb sign) aspects its own 4H. In D-3, 4H is in R-K axis, but aspected

by Jup in retro; (Single malefic affliction) In D-1 LL Mars is dispositor of Rahu & aspects it. In D-3, Mars is LL indicating disease prone body.

- 4L Sat is in inimical sign, hemmed between two enemy malefics, Mars & Sun. Mars is LL & 6L. Sat is also aspected by Rahu in 6H & being aspected by Mars. Sat is in nakshatra of Ketu posited in 12H. In D-9, Sat is afflicted by Mars & is in its sign of deb. 4L Mars is conjunct Sat, L (6, 7) & aspected by deb Sun & Rahu. In D-3, 4L Sat is in inimical sign in R-K axis & aspected by Mer, L (8, 11) & by exalted Mars, L (1,6); (Double malefic affliction)
- Rahu is in 2nd drekkana of 6H.

P2:

- Moon is aspected by Mars; Moon is in nakshatra of Mer, the L (8,11) in 8H & who is dispositor of Mars. Mars is in nakshatra of Moon & is dispositor of Rahu; it is hemmed between Sat & Ketu; In D-9, Moon is in 8H & its dispositor Jup is in R-K axis. In D-3, Moon is in sign of deb; (Single malefic affliction)
- Benefic Jup aspects Moon & 4H in retro. But it is in nakshatra of Mer, L (8,11) & is dispositor of Moon.

P3:

- **Dasha of Diagnosis:** Mars-Jup-Rahu; Age at diagnosis about 50 years; Mars is 6L & LL in inimical sign, is dispositor of Jup & Rahu and aspects Rahu. Jup is in nakshatra of Mer, L (8,11); Mars influences 4H, Sat & Sun in D-9. In Transit, Mars, Ketu, Moon & Jup were in 4H aspecting 4L Sat & transit Sat was conjunct natal Moon.

The dasha 5 months earlier differs only in PDL. This excludes Jup, Sat & Mer. It could have started forming in the PDs of Ketu/Ven/Sun/Moon/Mars/Rahu, the last three being more probable.

- **Dasha of Surgery:** Mars-Sat-Sun; The direct influence of malefic Mars on Moon & indirect influence on 4L Sat has resulted in surgery. In Transit, Jup, Mars & Ketu were in 4H & Moon was in own sign Cancer. Thus Jup & Mars were aspecting natal 4L Sat.

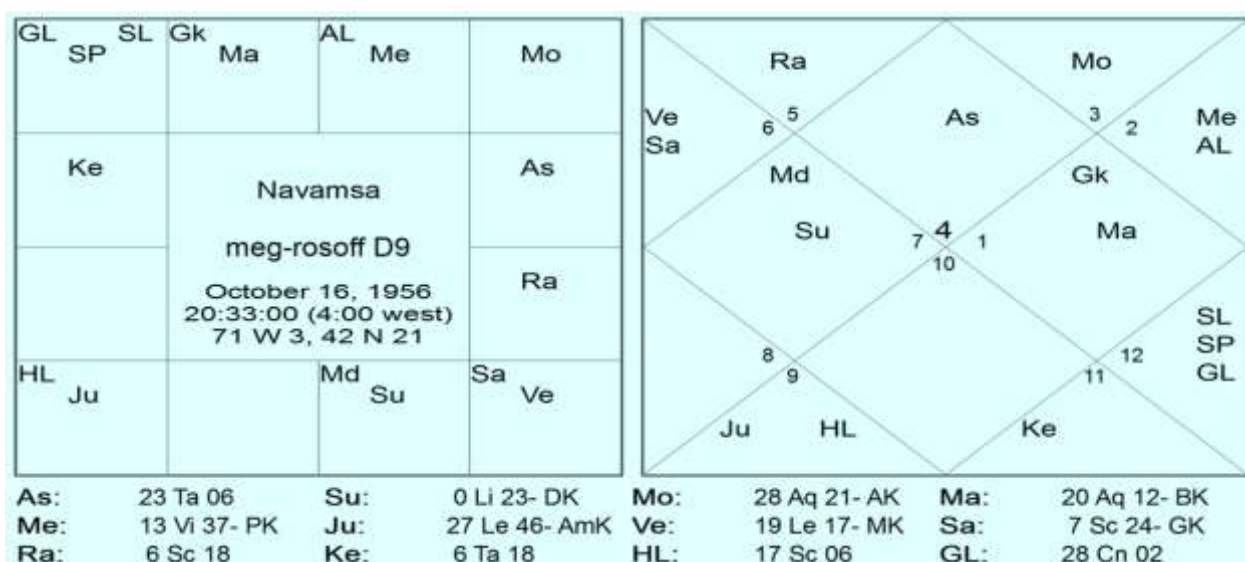

P4:

- (A) 8L is dispositor of 6L & they are in mutual kendras; 6L is also the LL.
- (B) (2) 6L Mars as dispositor of Rahu aspects 2H.
- (6) Jup is in nakshatra of Mer.

P5:

- The aspect of 4L Sat on its own 4H, influence of Jup on Lagna, Moon & 4H and presence of LL Mars in 11H of recovery from illness, might have resulted in the surgery being successful. In transit, Jup was influencing both 4H & 4L.

Case 2:

Case History: In 1996, Rosoff's youngest sister Debby was diagnosed with breast cancer and died in 2001. Another sister was diagnosed, and as Rosoff faced these challenges, the world look different to her. In July 2004, she herself was diagnosed with breast cancer.

P1:

- 4H has Jup, L (8,II) & Ven, L (I,6); it is aspected by Mars and Sat afflicted by deb Rahu in exact degree conjunction. In D-9, 4H has deb Sun and is aspected by Mars. In D-3, 4H is aspected by Mars & Deb Sun. (Double malefic affliction). Lag & LL are also aspected by Mars & afflicted Sat.
- 4L Sun is in sign of deb in 6H, at zero deg & in the nakshatra of Mars. There is an exchange between 4L & 6L. Sun is deb in D-9 also. In D-9, 4L is in deb with malefics Sat & Rahu. In D-3, 4L Sun of D-1 is deb, is 8L in D-3 and is conjunct Moon & Mars. (single malefic affliction in D-1 & double in D-9)

P2:

- Moon is conjunct Mars, in the nakshatra of 8L Jup, in the sign of afflicted Sat. In D-9, Moon is in 12H aspected by afflicted Sat and Jup, the 6L from 6H. Moon is also the LL. In D-3, Moon is conjunct 8L Sun & malefic Mars. (single malefic affliction)

P3:

- Dasha of diagnosis: Ket-Sat-Rahu; age about 48 years; Ket is in sign of deb in Lag in the nakshatra of 4L Sun, highly afflicted Sat placed in the sign of Mars is aspecting Lag & 4H, and Rahu is deb & in degree conjunction with Sat. In Transit, natal 8L Jup was in 4H, transit Mars was aspecting (8th) natal Moon and transit Sat was conjunct transit Moon.
- The PDLs just before detection were of Ven/Sun/Moon/Mars from Feb 2004 whence the cancer might have started as all are relevant PDLs.

- Influence of Mars on 4H & Moon could be the cause of surgery. Mars is influencing Moon & 4H as 12L. It is not known if she had a mastectomy operation (removal of breast)?

P4:

- (A) 6L & 8L are conjunct; 6L is also the LL.
- (B) (5) Rahu & Sat are in close conjunction in 7H (4th to 4H).
- (8) L (1,6) is in 4-10 axis aspected by Mars & Sat.
